

# Personalized Denim Fitting Experience

A guided, AI-assisted fitting that prepares both the customer and the associate before the appointment begins.

- Built on mocked Abercrombie store, catalog & customer data

# In-store denim fitting is hard to personalize before the customer arrives.

---

01

Customers arrive with fit goals, color constraints, and order history — sometimes a whole outfit they want to build around.

---

02

Associates start cold, spending the appointment discovering needs, finding sizes, and pulling alternatives.

---

03

Denim is the hardest category: rise, cut, stretch, waist, and length all change the outcome.

# One workflow that prepares both sides of the appointment.

CUSTOMER • SwiftUI iOS

## The booking journey

Book one of three stores and a guided slot

Share occasion, colors, style signals, womens / mens

Add an optional outfit-to-match photo

Message the thread, read the recap, leave feedback

ASSOCIATE • React dashboard

## The prepared queue

Live queue: Open • In Progress • Completed • Cancelled • No-show

Customer context and order-history summary

AI suggestions with rationales and sales-floor labels

Prep states (Suggested • Pulled • Skipped), notes, recap

# The customer taps book. The associate gets a plan.

- Booking returns immediately – recommendations generate in the background.

# An integrated enhancement, not a hard dependency.

STAGE 1 · RULE-BASED

## Deterministic scoring

Ranks the known catalog by fit, stretch, waist, length, focus & avoid colors, audience, and category diversity — then builds a shortlist.

shortlist

STAGE 2 · CLAUDE

## Re-rank & rationales

Reorders only the provided product IDs and writes concise, associate-facing reasons for each pick.

RESILIENT · FALLBACK

## Always usable

No API key or a failed call falls back to the scorer-ranked order with rule-based reasons. Nothing blocks the appointment.

`claude-opus-4-8`

`@anthropic-ai/sdk`

`prompt caching`

`Optional outfit photo → text-only pairing context; image bytes are never persisted.`

# Better-prepared appointments, for everyone in the loop.

## ASSOCIATES

Fewer cold starts — context and a curated shortlist before the customer arrives.

## CUSTOMERS

A guided appointment that starts from their goals, history, and style signals.

## STORE LEADERS

A repeatable queue for non-peak fittings — assignment, lifecycle, prep accountability, feedback.

---

**~10 min**

saved on prep per appointment

**≈ 1 hr / week**

associate time recovered per store, at 6 fittings

Illustrative — based on demo assumptions, not measured production results.
